

Aspire End-User Workstation Requirements

The following are combinations of hardware/software that Project Aspire recommends for an end-user accessing the Aspire online financial management system. Please keep in mind that these requirements do not account for high volume reporting and data manipulation activities such as nVision reporting or Enterprise Performance Management (EPM) data extraction. The requirements for this type of users will be determined individually based on the volume of data manipulated and reporting needs.

Aspire End-User Software Requirements

Operating System: Microsoft Windows 98, 2000, NT 4, XP

Browser: Microsoft Internet Explorer 6.0 SP2

Note: Microsoft Internet Explorer 7 is not supported.

Java: Microsoft Java Virtual Machine (JVM) 1.1.4 or higher
Or
Sun Java Runtime Environment (JRE) 1.3.1.02 or higher

NOTE: Java is needed for Computer Based Training (CBT).

Application Software: Microsoft Excel 2000 or higher required for some activities such as Excel to Component Interface (CI), nVision and query tools.

Microsoft Word 2000 or higher

Aspire End-User Hardware Requirements

- 256 MB RAM recommended (64 MB RAM minimum)
- 800 MHz Pentium or equivalent processor (Pentium 166 MHz minimum)
- 200 MB of free disk storage
- VGA controller and display of 800x600 resolution or higher and High Color (16 bit) mode for the best display results
- 10 MB Ethernet card connected to a switched TCP/IP based LAN
