Eric Lloyd<br>Manager<br>Special Disability Trust Fund<br>Department of Financial Services<br>200 East Gaines Street, Larson Building<br>Tallahassee, FL 32399-0317

Dear Mr. Lloyd:
Pinnacle Actuarial Resources, Inc is pleased to provide the enclosed final report for the Florida Department of Financial Services, Division of Workers Compensation (Division) on the actuarial valuation of the present and projected Workers Compensation liability of the Special Disability Trust Fund (SDTF or Fund) as of June 30, 2008, along with an estimate of future assessment rates and elapsed time until the Fund is its liabilities.

We have enjoyed working with you and your team on this valuation project again this year.
If you have any questions, or require anything further please call me at (317) 889-5760, or Chris Carlson at (614) 734-8366.

Sincerely,

John E. Wade, ACAS, MAAA
Senior Consulting Actuary

## APPENDICES

# Florida Division of Workers’ Compensation Special Disability Trust Fund Actuarial Valuation as of June 30, 2008 

## I. BACKGROUND

## Purpose \& Scope

Pinnacle Actuarial Resources, Inc. (Pinnacle) was retained by the Florida Department of Financial Services, Division of Workers Compensation (Division) to provide an actuarial valuation of the statutory liabilities of Florida's Special Disability Trust Fund (SDTF or Fund) as of June 30, 2008, along with an estimate of future assessment rates and elapsed time until the Fund is current on its liabilities.

## Fund History

The Special Disability Trust Fund was established as a mechanism to encourage the employment of workers with preexisting permanent physical conditions. The Fund reimburses insurance carriers and self insured employers for benefits they must pay because a preexisting permanent impairment has merged with a subsequent permanent impairment as a result of a work-related accident. As such the Fund reviews, adjusts, and settles requested reimbursements.

Injuries occurring on or after January 1, 1998 are excluded from reimbursement by the Fund. Injuries occurring before 1998 are still eligible to seek reimbursements. While most notices of pre-1998 claims have been submitted, there is still the potential for new claims to be submitted, for closed claims to be reopened, and for open but recently inactive claims to seek additional reimbursements. Hence, the Fund is responsible for known and unknown future liabilities on eligible claims.

After a claim has been accepted, a request for reimbursement of additional expenses may be submitted annually. The Fund generates revenues to pay claims from two sources. The major source is an assessment applied to the net written premium of workers compensation insurance carriers and self insureds. The amount of the assessment is established by Florida Statute. There is also a minor amount of revenue generated by flat fees for new notices and proof of claim
submissions. This latter revenue has become negligible as the cutoff date for accidents is now over ten years old.

Currently, the Fund establishes the amount it expects to disburse in the coming fiscal year based on past disbursements over the last three years and sets the assessment rate accordingly. However, there is a cap on the assessment rate and until recently the fund has not been able to collect assessments sufficient to cover liabilities. The fund became current in March, 2008. In each ensuing year, collected assessments should outpace disbursements, allowing the fund to operate at a surplus.

## Methodology

Two different methods were used to establish estimated outstanding claims payments. Under the Average Payment method, individual known claim awards were extended for the expected duration of the claim. Pending, IBNR and future claim activity on open notices were determined by application of average claim payments and durations. (IBNR, Incurred But Not Reported, claims represent accidents that have already occurred during the coverage period, but have not yet been notified to the fund.) Under the Loss Development method, past payments were aggregated at various points in time and development (age-to-age) patterns were established to project the payout on known and unknown claims. These analyses were conducted on a combined claim basis because information on a claim type basis was not sufficient to allow a thorough review of the data by claim type. Claims data were segregated and analyzed within two different payment options. First and Final claims are defined as those claims where the approval of a claim is expected to be the only payment made. (There are situations where First and Final claims are reopened, but as a category, these are analyzed with the rest of the First and Final claims.) All other claims were considered not to be First and Final and were analyzed as a group.

Payout patterns were established based on future life/mortality expectations for the first method. The periodic payment schedules of the individual claims were used to estimate future payout patterns under the second method. These same patterns were applied to estimated pending, IBNR and future claims. Historic industry premium and Fund expenses were analyzed to estimate future annual changes to each of these items. Future interest earnings were calculated by multiplying the projected average fund balances at various points in time by the selected
interest rates. Note that if the Fund ever moves back into a deficit position, future interest earnings would be limited because the opportunity to earn investment income is restricted to the amount of time the Fund has monies available for investment. Also, in future years, the investment income will continue to keep pace with assessments.

## Data

Electronic claims files were provided by the Division. These files contained Date of Accident, Date of Notice, Claim Status, Date of Request, Request Status, Amount of Request, Amount Approved, Year of Payment and other miscellaneous information. Claim activity after Calendar Year 1995 has complete transactional information. Claim activity prior to 1995 is being updated as time permits. Claim types have not been recorded in sufficient detail to allow a confident review by claim type consistent with prior analyses.

One notable absence from the claim file was age of the injured worker. We have assigned an average age to each claim. The projected death date was then estimated using the 94 GAM tables to determine life expectancy. The Fund has begun to adjust some records by adding date of birth. In those cases we have used the actual date of birth to determine age.

Historic assessable compensation premiums were provided by the Division. Historic administrative costs and fund balances were also provided by the Division.

## Distribution \& Use

This report was prepared pursuant to and for the purposes stated in section 440.49(9)(e), Florida Statutes, for the Florida Department of Financial Services - Division of Workers’ Compensation - Special Disability Trust Fund. The Report will be distributed to the Governor of Florida, President of the Florida Senate, and the Speaker of the Florida House of Representatives. In addition, it will be available to the public from the Florida Department of Financial Services Division of Workers’ Compensation by contacting Eric Lloyd, Manager - Special Disability Trust Fund, 200 East Gaines Street, Tallahassee, Florida, 32399-4223, and on the Internet at the Department's Division of Workers' Compensation homepage at http://myfloridacfo.com/WC/. This report is the property of the State of Florida and is a public record. The Department is authorized to distribute this report consistent with section 440.49, Florida Statutes, and
applicable law. Pinnacle expects to receive notice of any Departmental reference to Pinnacle in relation to this report in any reports, accounts, or other published documents.

The exhibits attached in support of our findings are an integral part of this report. These sections have been prepared so that our actuarial assumptions and judgments are documented. Judgments about the conclusions drawn in this report should be made only after considering the report in its entirety. We remain available to answer any questions that may arise regarding this report. We assume that the user of this report will seek such explanation on any matter in question.

Our conclusions are predicated on a number of assumptions as to future conditions and events. Those assumptions, which are documented in subsequent sections of this report, must be understood in order to place our conclusions in their appropriate context. In addition, our work is subject to inherent limitations, which are also discussed in this report.

## Reliances \& Limitations

We have prepared this report in conformity with its intended use by persons technically competent in the areas addressed and for the stated purposes only. Judgments as to conclusions, methods, and data contained in this report should be made only after studying the report in its entirety. Furthermore, we are available to explain any matter presented herein.

Throughout our analysis we have, without audit or verification, relied on historical data and qualitative information provided by the Division. We have reviewed this data for consistency and believe it to be reasonable and accurate. However, we have made no attempt to audit or verify this information. The accuracy of our results is dependent upon the accuracy and completeness of this underlying data. Therefore, any material discrepancies discovered in this data by the Division or its auditor should be reported to us and this report amended, as warranted. It has been noted that not all claims records include the age of an injured worker. Claims records for eligible accidents prior to 1995 are being updated by the SDTF for activity occurring before 1995 through the audit process. This adds to the potential uncertainty associated with calculating estimates of the liabilities.

There is a limitation upon the accuracy of these estimates and projections in that there is an inherent uncertainty in any estimate of loss reserves and financial projections. This is due to the
fact that the ultimate liability for claims is subject to the outcome of events yet to occur, e.g., the likelihood of claimants bringing suit, the size of awards, changes in the standards of liability, and the attitudes of claimants toward settlement of their claims. Also, our financial projections are subject to a very high degree of uncertainty because they require prediction of future economic, legal, and judicial conditions. In our judgment, we have employed techniques and assumptions that are appropriate, and the conclusions presented herein are reasonable, given the information currently available. However, it should be recognized that future results will likely deviate, perhaps materially, from our estimates.

## II. EXECUTIVE SUMMARY

The unfunded liability of the Special Disability Trust Fund is estimated to be $\$ 2,168$ Million as of June 30, 2008 on an undiscounted basis. The table below summarizes past valuations from previous actuarial analyses along with Pinnacle's estimates of future valuations for comparative purposes. Please note that for the future valuations, Net revenue reflects estimated fees, general revenue service charges, administrative expenses, and investment income, as well as approved payments and assessments. Discounted liabilities reflect a $6.0 \%$ discount rate for all years.

## ESTIMATE OF UNFUNDED LIABILITIES

## (values in millions)

| Valuation <br> Date | Estimated <br> Undiscounted <br> Unfunded <br> Liability | Estimated <br> Discounted <br> Unfunded <br> Liability |
| :---: | :---: | :---: |
| $09 / 30 / 99$ | $\$ 3,240$ | $\$ 1,640$ |
| $09 / 30 / 00$ | 2,750 | 1,550 |
| $09 / 30 / 01$ | 2,600 | 1,420 |
| $06 / 30 / 02$ | 2,390 | 1,210 |
| $06 / 30 / 03$ | 2,160 | 1,450 |
| $06 / 30 / 04$ | 2,060 | 1,360 |
| $06 / 30 / 05$ | 1,860 | 1,200 |
| $06 / 30 / 06$ | 1,690 | 1,090 |
| $06 / 30 / 07^{*}$ | 2,214 | 1,231 |
| $06 / 30 / 08$ | 2,168 | 1,055 |
| $06 / 30 / 09$ | 1,913 | 919 |

*Estimates at 06/30/07 and subsequent reflect Pinnacle Actuarial Resources, Inc. analysis.
Estimates prior to 06/30/07 drawn from prior reports provided by other consulting actuarial firms.

The table above shows the advanced estimated undiscounted unfunded liabilities of \$1,913 Million as of June 30, 2009. Further, it is estimated that the SDTF will remain current in its outstanding liabilities during the foreseeable future. That is, the Fund will maintain a positive surplus as assessments keep pace with approved payments. The impact on future assessment rates is discussed later in this report.

The number of open claims continues to decline, dropping a small amount in the past 12 months to 6,304 as of $06 / 30 / 08$. Additional data as provided by the Division is displayed in the following table.

## Historic Claims Records

| Item | FY 05-06 | FY 06-07 | FY 07-08 |
| :--- | :---: | :---: | :---: |
| Number of Open Claims on file at year-end | 7,032 | 6,718 | 6,304 |
| Number of Notices filed in FY | 8 | 5 | 5 |
| Number of Newly Received Proofs of Claim <br> Processed by the Fund in FY | 9 | 6 | 5 |
| Fee Revenues Received from 07/01 to 06/30 | $\$ 5,250$ | $\$ 3,500$ | $\$ 2,750$ |
| Fee Revenues Refunded from 07/01 to 06/30 | $\$ 0$ | $\$ 0$ | $\$ 0$ |
| Fee Revenues Applied to Pay Down Liability in <br> FY | $\$ 5,250$ | $\$ 3,500$ | $\$ 2,750$ |
| Average Time Required to Reimburse Accepted <br> Claims Paid in FY | 42.1 mos | 27.2 mos | 11.7 mos |
| Average Administrative Cost per Claim in FY* | $\$ 160.81$ | $\$ 210.08$ | $\$ 281.06$ |

* The Fund determines the Average Administrative Cost per Claim by dividing allocated administrative costs by the number of reimbursement approvals in a given fiscal year. As the number of reimbursement approvals declines, the average administrative cost per claim rises. In FY 06-07 and FY 07-08, the Fund conducted Data Verification Audits, which used resources that would otherwise have been used to audit reimbursements. This has suppressed the number of reimbursement audits during this time and reduced the number of approvals. This is expected to be reversed with the conclusion of the Data Verification Initiative and expected future staff reductions. The Fund does not believe that the rise in Average Administrative Cost per Claim is indicative of accumulating inefficiencies

## III. SPECIAL DISABILITY TRUST FUND ANALYSIS

## 1. Liability on Approved Claims as of June 30, 2008

## Development Method

Two approaches were followed to determine the estimated liabilities on approved claims. The first approach is referred to as the Development Method and is calculated by comparing accumulated payments at successive annual valuation points to develop patterns of payment, often referred to as age-to-age factors or link ratios. As an example of this method, if claim payments have historically increased an average of $10 \%$ from the 132 month valuation to the 144 month valuation, then we can anticipate that ensuing accident year claim payments will increase $10 \%$ as they progress from their 132 month valuation to their 144 month valuation. Pinnacle analyzed the historic fund data separated into annual accident periods ending June 30 each year. Hence, for the Accident Year ending 06/30/1998, the historic data is considered to be 132 months old as of the 06/30/2008 valuation. Continuing the example described above, we would expect this accident period to have an additional $10 \%$ of claims payments from July 1, 2008 to June 30, 2009. Similar adjustments are made for future valuations until all claims are estimated to be closed.

As accident periods age, the SDTF development factors change reflecting fewer notices and a higher incidence of requests and approvals. In the SDTF data it appears that the more recent development is less than earlier development periods, possibly impacted by the immature nature of the latest report years. (For example, it has been observed that requests during Fiscal Year 2007 increased from $\$ 48$ million to $\$ 72$ million from the $06 / 30 / 2007$ evaluation to the 06/30/2008 evaluation, ) Pinnacle selected two different sets of development factors to augment our analysis of the claims that were not deemed to be First and Final. We looked at two sets of development factors. The first was based upon the most recent four year average development and the second based upon the most recent period only. For the development approach, we selected the four year average of development factors as our estimate.

Note that for the 2007 analysis, we utilized a similar methodology but used a three year average instead of a four year average to determine the first set of loss development factors, which were eventually averaged with the most recent development factors to get our estimate from the Development Method. For this evaluation we reduced the credibility assigned to the most recent
year's loss development factors because the data appears to be much more immature than we originally thought. This substantially raised our estimate of outstanding liability using the Development Method.

For First and Final claims, the nature of the claim types led to development patterns distinctly different from the other claim types. These development patterns are much more shorter-tailed, and because there is a great amount of variability within the historic patterns, more years were included in the selection of the anticipated development patterns.

Each Accident Year is evaluated separately. Since second injury workers compensation claims are, by nature, very long tailed, and since the data base is limited in the number of years of evaluation that can be provided, tail factors must be applied to the developed payments to reflect the remaining exposure beyond the available historic patterns. Tail factors are selected based on the oldest available development factors and the anticipated remaining life expectancy of the injured worker.

The Development Method estimates ultimate liabilities for all the various stages of claims activity combined, including open, reopens, noticed but not approved, and IBNR. The calculations using the Development Method are displayed in Exhibit 2.

The lack of a complete history of Approvals prior to 1995 is an issue of concern with applying the Development Method to the SDTF data base. The lack of history not only impacts the calculation and selection of development factors, it also impacts the estimate of payments approved to date. This latter figure is the base upon which the development factors are applied. To overcome this issue, we looked at the incremental approved payments for each of the three fiscal years ending $06 / 30 / 95,06 / 30 / 96$, and $06 / 30 / 97$, separately. These payment periods were deemed to have complete approval histories. We applied estimated incremental development factors to each fiscal year payments to estimate the accumulated payments to date as of 06/30/94 and then, selected a best estimate of the ultimate approvals as of $06 / 30 / 94$ based on the three separate estimates.

It should be noted that the historic data continues to be revised as new information becomes available. As time permits, the SDTF enters old claims data into the historic electronic data
base. Also, some files with missing birth dates have been updated to include birth dates. Both of these types of adjustments impact the base the development method uses, and therefore the estimates that result. For example, approvals through $06 / 30 / 07$ as of $06 / 30 / 07$ were approximately $\$ 2.325$ billion. One year later, approvals through $06 / 30 / 07$ as of $06 / 30 / 08$ were approximately $\$ 2.365$ billion. The additional $\$ 40$ million of previously uncoded approvals represents less than a $2 \%$ increase in the underlying data and a similar increase in the otherwise estimated outstanding liabilities. However, a large portion of that growth occurs in the most recent fiscal years, thus making the Development Method less desirable for our final selections.

## Average Payment Method

Because of the above described lack of Approval history and the resulting potential variance in estimated results, an alternative method was used to provide a second estimate of future approved claim payments. This alternative is referred to as the Average Payment Method. Under this approach, we extend every open claim by its anticipated payout pattern based on each claimant's date of accident, assumed age at accident date, assumed life expectancy, and the projected average annual payment of each claim. Claims were broken down between First and Final and Other-than-First-and-Final. Claims were not broken down by Permanent Total Disability, Wage Loss, and Unknown as in previous analyses because the coding in the claim file was not sufficient to warrant our confidence in its predictive power.

The claim data included claims that have experienced approved payments, open claims that have been noticed and accepted without yet having reimbursement requests approved, and claims that have been noticed and accepted but have yet to file a reimbursement request. In addition, some June approvals carry over at Fiscal Year End for administrative reasons, thus leaving existing pending approvals in the database at Fiscal Year End for which payment has yet to be made. Adjustments were also made for Incurred But Not Reported (IBNR) claims. Claims with a past approval history were assumed to have an average future annual payment based on the past average approved amounts. Open claims with a request history but not yet having an approval history were assumed to have average future annual payments determined by applying a ratio of approved amount to requested amount to the actual requested amount. The applied ratio was developed from the claims history of those claims that have approval amounts.

Age of claimant was not available for most of the claims in the file. Of the 133 records containing birth date, their average age at accident is 43.77 as of $06 / 30 / 2008$. Based on a review of national accident statistics, an age of 42 as of date of accident has been assumed for all claimants without birth date coded in their claims records. This is unchanged from the 2007 analysis. By assuming an average age on the uncoded records, projections on the entire claim file are expected to balance out for older and younger claimants. The expected life expectancy is based on the mortality table discussed below.

As open average claims payments are extended into the future, an adjustment must be made for inflationary pressures that will apply in the future. Based upon discussion with Division staff and on relevant insurance industry data, an annual payment inflation rate of $4.5 \%$ was selected to account for increased indemnity and medical costs. This selection was applied to all claim types and reflects the fact that Permanent Total Disability claims receive an automatic $5.0 \%$ annual increase, while medical inflation has recently been around $4.1 \%$. The selection of $4.5 \%$ reflects a decrease from the 5\% annual inflation rate used in the last report.

At issue with this estimating technique is the calculation of each claim's average annual payment. The approval history of the SDTF, as reflected in the claims data base, clearly shows many claims have a sporadic request and approval history. While there may be several years between notice being filed and a first payment request being made, there are often gaps of one to several years between consecutive requests, and therefore approvals.

Another issue is the uncertainty introduced by "front end" loading of claim payments. Many claims will have large initial payments as the injured parties are nursed back to maximum medical improvement. After maximum medical improvement, the ongoing payments are much smaller. Also, the initial request for reimbursement from the insurer may include multiple previous years' payments while the subsequent payments are processed on an annual basis which also contributes to the "front end" loading. As a result, this method has the potential to produce liability estimates which may be higher than will actually emerge. Because of the many imprecisions within this method noted above, the variance in potential estimated outcomes can be quite large.

## Selected Method

Selected ultimate losses, and therefore outstanding losses, were based upon a review of both methods discussed above. The Development Method approach was deemed to be less stable and was not relied upon in the selection of the final estimates. The 2007 analysis had assumed the opposite. The estimated liabilities produced by the Average Payment Method seem to be more consistent when compared to last year's estimates than those produced by the Development Method. Therefore, final selections were based upon the Average Payment Method as is summarized in Exhibit 1. The overall liability for unfunded current and estimated future approvals is estimated to be $\$ 2,168$ million as of $06 / 30 / 08$ on an undiscounted basis.

At this point a brief discussion of Pinnacle's estimate of liabilities at 06/30/07 (\$2.2 Billion) compared to the prior actuary's estimate of liabilities at 06/30/06 ( $\$ 1.7$ Billion) is in order. While both analyses relied on the development method, the prior study segmented and reviewed the historic claims data by claim type (permanent total, wage loss, and other), whereas Pinnacle reviewed the data for all claim types combined. In addition, both studies required estimates of prior approval and payment history be made on accident periods prior to 1995. The prior study based these estimates on claim activity in accident year 1995 while Pinnacle based these estimates on claim activity in accident years 1995-1997. Finally, the selection of the development factors used to age the accident year periods is heavily dependent upon the judgment of the analyst reviewing the data.

## 2. Liability on Incurred But Not Reported Claims as of June 30, 2008 and Subsequent

IBNR counts were estimated and then treated in a similar fashion as those claims noticed but not approved. The estimated IBNR counts were derived from historic developments. As of $06 / 30 / 08$, there is an estimated 6 IBNR claims. There are also claims that have been noticed but have not filed requests. It is anticipated that a portion of those notices will file future requests. In our 2007 analysis, we assumed a fraction of the unrequested claims would become requested and would eventually be paid an average amount. This year, to estimate the number of unrequested but noticed claims that will eventually become requested, we relied on the development of requested claim counts, utilizing a methodology similar to the development of approved claims amounts.

The total provision for IBNR is made up of these anticipated requests and new notices assuming an average payment per claim. The average payment per claim was selected based upon a comparison of claim payments and claim counts on all closed claims. The final result (\$14.9 million) is listed in the Average Payment methodology in Exhibit 3. This provision is inherently included in the Development method shown in Exhibit 2.

The impact of the change to the IBNR calculation described above raised our estimated IBNR liability by $\$ 13$ million, but only represents one half of one percent of the estimated outstanding liability as determined by the average paid methodology.

## 3. Future Cash Flow Analysis

The Cash Flow Analysis is shown in Exhibit 5. There are many aspects to projecting cash flows. These are discussed below. The Fund reached a surplus position in March, 2008.

## a. Projected Assessments and Assessment Rate

Assessments are determined by applying the Assessment Rate to the subject net written premium. The net written premium is developed from the insurance carriers writing workers compensation insurance and the estimated net written premium that would have been developed by those entities self insuring their workers compensation exposure.

Recent historic premium levels were reviewed. Premium levels have been declining. The Fund's estimate for next year's premium is showing minimal change. Previous premium level increases have been attributed to the increase exposure to construction classifications following recent hurricane activity in the state. While it is difficult to predict what the premium levels will do in the near term, we anticipate that premium levels will eventually begin to rise again. We have selected an assumed no change in annual premium for the next two years, then increases of $1 \%$ for each of the following years. This represents a decrease from our $2 \%$ selection in last year's analysis. See Exhibit 5, Page 3.

The Assessment Rate is set annually according to Florida Statute 440.49(9), which states, "The annual assessment shall be calculated to produce during the ensuring fiscal year an amount which, when combined with that part of the balance in the fund on June 30 of the current fiscal year which is in excess of $\$ 100,000$, is equal to the average of:
a. The sum of disbursements from the fund during the immediate past 3 calendar years, and
b. Two times the disbursements of the most recent calendar year."

The Assessment Rate is capped at $4.52 \%$, and has been at that level since the inception of the cap in 1994. The assessment rate is calculated in the cash flow Exhibit 5, Page 1.

## b. Projected Notice and Proof Fees

Notification fees are set at $\$ 250 /$ notice and Proof of Claim fees are set at $\$ 500 /$ proof, as established by Florida Statute 449.49(9). Pinnacle estimates that there will be 3 new notices and 4 proofs in Fiscal Year ending 06/30/09, and 1 less of each in each ensuing fiscal year. The table in the Executive Summary above also shows that these fees have been declining to negligible amounts, as would be expected since eligible dates of accident must have occurred prior to 1998. All such fees have been applied against the Fund's outstanding liability in the recent past and continue to do so in our projected cash flow analysis. This adjustment has an insignificant impact on the outstanding liability or projected assessment rate.

## c. Projected Investment Income

Investment income is earned on the surplus within the Fund and the cash balances reflecting the timing differences of revenues and payments. Projected future surplus has been subjected to investment returns. The investment rate was set at $3.0 \%$ following analysis of past returns provided by the Division. Again, this projected investment income is minor compared to assessments. Estimated investment returns are contained in the cash flow Exhibit 5, Page 1.

## d. Projected Approved Claim Payments

The analysis to estimate future claim liabilities discussed above is carried further to estimate future payout patterns to spread the ultimate liabilities across the expected lifetime of each claim. See a summary of projected approved payments in Exhibit 4.

## e. Projected Administrative Expense

Administrative expense is made up primarily of fixed expense related to the operation of the Fund and therefore is subject to normal inflationary pressures, even though the number of claims being processed by the SDTF is declining. Based on an analysis of the recent expense history, a future annual inflationary expense factor of $4 \%$ was selected to increase expenses each year. The selection reflects a decrease from the $5 \%$ annual inflationary expense factor used in the last report. See Exhibit 5, Page 4.

## f. Projected General Revenue Service Charges

The General Revenue Service Charge is set by statute at $7.3 \%$ of all revenue, per section 215.20, F.S., and is expected to continue at this rate for purposes of future cash flow projections. The Revenue Service Charge is applied to assessments, fees, and investment income displayed in the cash flow exhibits.

## g. Projected Cash Flows

The projected cash flows can be observed in Exhibit 5, Page 1. Net revenue is calculated each year as the sum of assessments, fees and any investment income less the sum of anticipated approved payments, administrative expenses, and general revenue service charges. The annual net revenue is added to the beginning Fund Balance to determine the ending Fund Balance. The estimated beginning Fund Balance on 07/01/08 was provided by the Division.

## h. Projected Timing to Surplus Position

The projected timing of the Fund achieving an operating surplus position where claims can be paid as soon as payments are approved falls out of the cash flow analysis. A review of Exhibit 5 shows that this point has already been reached in Fiscal Year ending 06/30/08. The fund had a balance of $\$ 59$ million at $06 / 30 / 08$, but also had unpaid approved payments of $\$ 8$ million, resulting in a fund balance of over $\$ 50$ million. Anticipated approved payments from 07/01/08 to $06 / 30 / 09$ are $\$ 60$ million. Coupling this with an expected Revenue Service Charge of $\$ 15$ million and Administrative Expenses of $\$ 1$ million would lead to a deficit of about $\$ 26$ million by 06/30/09. However, offsetting anticipated assessments of $\$ 207$ million and Investment income of $\$ 5$ million lead to an expected surplus of $\$ 186$ million at 06/30/09.
i. Estimated Fund Liability as of 06/30/09

The estimated Fund Liability as of 06/30/09 for outstanding claim payments is displayed in a table in the Executive Summary above. All anticipated future payments after 06/30/09 are accumulated to arrive at the undiscounted estimated liability of $\$ 1,913$ million. The discounted liability is estimated to be $\$ 919$ million and is derived by assuming the average payment date of each future Fiscal Year is the midpoint of the Fiscal Year and discounting the entire estimated payment amount back to 06/30/09, using a $6 \%$ discount rate. Hence, the anticipated Fiscal Year ending 06/30/10 payments are discounted for a half year, the anticipated Fiscal Year ending 06/30/11 payments are discounted for one and a half years, and so forth.

## 4. Adjusted Assessment Formula, Alternative Scenario

Assessment Formula Based on Amounts Approved
An additional Cash Flow and Assessment Development exhibit has been prepared showing the impact of using an alternate assessment formula. The impact of changing the assessment formula so that it is based on amounts approved rather than amounts disbursed, among other revisions, are shown on Exhibit 6, Pages 1 and 2 for such a change to occur on 07/01/2009.

Specifically, the alternate scenario calls for the assessment rate shall be calculated to produce during the ensuring fiscal year an amount which, when combined with that part of the balance in the fund on June 30 of the current fiscal year which is in excess of \$1,500,000, is equal to one hundred twenty-five percent (125\%) of the average of the amount approved for reimbursement in each of the immediate past 3 calendar years.

Because the Fund is current with the payment of approved claim payments, this alternate scenario does not have any impact on the timing of the Fund becoming current, although the assessment rate is immediately reduced below the maximum cap. See Exhibit 7

A review of Exhibits 5 and 6 reveals that the projected assessments over the long term are nearly identical in total regardless of which formula is used, although the approval method smoothes out the collection across the years. As a result, the projected surplus levels are much lower under the approval methodology because the assessments in the first two years are greatly reduced when compared to the disbursements method.

A comparison of projected assessment rates under each scenario is displayed in Exhibit 7.

## 5. Mortality Table Notes

We used the 1994 Group Annuity Mortality tables for this study. The Group Annuity tables are derived from the working population, as opposed to the entire population, therefore reflecting a better estimation of workers compensation claimants. The 1994 GAM tables include margins for random variations in mortality rates and contingencies for other factors such as smaller blocks of business, mix of employment types (white-collar versus blue-collar, higher-income versus lowerincome, etc.) and geographic concentration of risk. The margins were established so that the use of the GAM tables would produce reserves adequate to cover various business characteristics and random variations.

## IV. CONCLUDING REMARKS

The estimated liabilities of the Fund in this report are nearly the same as our estimates in our 2007 analysis. This is due to the fact that we placed no reliance on the Development Method because of the perceived immaturity of the recent development. Hence we have given more credence to the Average Payment Method. Assumptions about assessable premium growth, investment income, and administrative expense inflation also play roles in varying estimates from the prior report. We have relied on the data provided and employed standard actuarial techniques to derive our estimates. We have provided the Division with estimates we believe are appropriate.
