Business Process Overview

This Budget Execution and Management business process addresses how the Budget Check process within Florida PALM validates the source transaction to available appropriations and ChartField values. The configuration of Florida PALM determines if a transaction is subject to Budget Check. Some transaction types such as assets, equity, liability, revenue, and others are configured to not be subject to Budget Check, therefore these transactions skip the Budget Check process and proceed with the transaction lifecycle. All other transactions are Budget Checked.

Dependencies and Constraints

- Agency appropriation balances should not exceed appropriations that are authorized in the General Appropriations Act (GAA) and subsequently adjusted to reflect vetoes, supplementals, failed contingents, and current Fiscal Year (FY) budget amendments. Authorized/Adjusted appropriations are required to be released prior to recording an expenditure.
- Department of Financial Services (DFS) and Executive Office of the Governor/Office of Policy and Budget (EOG/OPB) issue memorandums that provide direction and guidance for the management of appropriations.

Business Process Flow Details

CW.20.2 Budget Execution and Management		
Swim Lanes – Definition	Agency Processor: Agency role responsible for Budget Check processing Agency Budget Maintainer: Agency role responsible for assisting with managing budget errors DFS Budget Maintainer: DFS role responsible for performing Budget Check tasks	
Process Step ID	Process Step Title	Description of Process
1	Create/Review Source Transaction	An Agency Processor creates and reviews a transaction. The configuration of Florida PALM determines if a transaction is subject to Budget Check based on the Account type. If the transaction is an excluded Account type, the transaction is not subject to Budget Check. Transactions of non-excluded account types are subject to Budget Check.
2	Run Budget Check	The Budget Check is initiated by a user or an automated process. Budget Check validates the source transaction to available appropriations and ChartField values. This step consumes budget and creates an expenditure entry. If no errors result from the Budget Check, the transaction passes and the source transaction continues to approval and posting. If errors exist, the Agency Processor manages the Budget Check errors. Revenue transactions do not generate Budget Check errors and proceeds with the

		<p>transaction lifecycle. Expense transactions may generate Budget Check errors which requires exception handling.</p> <p>Agencies use Florida PALM online inquiry screens and designated reports, as well as, Departmental FLAIR reports, including the Schedule of Allotment Balances, Encumbrance and other reports as appropriate.</p>
3	Proceed with Transaction Lifecycle	Transactions for excluded account types, overridden transactions, and revenue transactions that have been budget checked are able to proceed with the transaction lifecycle.
4	Update Budget Ledger Balances	An expense transaction that successfully passes Budget Check, and does not generate errors, updates the budget ledger balances to consume budget. The transaction then proceeds with the transaction lifecycle.
5	Manage Budget Check Errors	<p>All transactions that fail Budget Check produce errors and are included in the Commitment Control Exceptions (WorkCenter). The Agency Processor retrieves the budget exceptions to address all errors noted.</p> <p>The Agency Processor works within the source module and engage the Agency Budget Maintainer and/or the agency program office to review and resolve the errors.</p>
6	Update or Delete Transaction	<p>Transactions that produce accounting errors are modified in the appropriate Florida PALM source module. If Budget Check errors exist due to incorrect accounting codes, the Agency Processor can update the accounting codes and resubmit for Budget Check. If necessary, the Agency Processor contacts the agency budget office and/or agency program office for assistance with modifying the transaction.</p> <p>If the Budget Check errors cannot be corrected, the Agency Processor deletes the transaction in the appropriate Florida PALM source module.</p>
7	Correct Transaction	If the failed transaction originated in Departmental FLAIR, the Agency Processor works to correct the failed Budget Check transaction within Department FLAIR.
8	Contact Agency Budget Office	<p>The Agency Processor communicates with the agency budget and program offices regarding the errors which are related to insufficient appropriations and/or releases issue.</p> <p>The agency works collaboratively to determine the appropriate actions to address errors which include resubmit for Budget Check.</p>
9	Hold Transaction for Available Budget	The agency can choose to hold the transaction while taking other actions such as process budget amendment, consider alternate funding sources, request an override of the

		<p>appropriation exception, or update the transaction in the appropriate source module.</p> <p>After the agency takes the appropriation action to make budget available, the transaction is resubmitted for Budget Check.</p>
10	Submit Override Request Form	The Agency Budget Maintainer submits override request form for appropriation exception to the DFS Budget Maintainer.
11	Override Exception	The DFS Budget Maintainer determines if an override is appropriate or if the transaction should be resubmitted for Budget Check again. The DFS Budget Maintainer works collaboratively with EOG/OPB and where appropriate, the DFS Budget Maintainer overrides the transaction, which updates the budget ledger balances to consume budget.
12	Notify Agency	<p>Once the transaction has been overridden, the DFS Budget Maintainer notifies the agency and the transaction proceeds forward in its lifecycle.</p> <p>The DFS Budget Maintainer can deny override request and advice the agency to submit transaction for Budget Check again for appropriate agency action.</p>
13	Update Budget Checking Balance	<p>If the override request is granted, the transaction meets the Budget Checking criteria, and does not generate an error, the transaction continues processing as described in the below business subprocesses:</p> <ul style="list-style-type: none"> • CW.10.2.1 Create and Approve Journals • CW.30.3.1 Process Vouchers
